

CLAIMS:

1. Method of recording information on a recordable multi-layer record carrier, said record carrier comprising a first information layer and a second information layer for storing the information, wherein information is incrementally recorded on the disc such that the area regarded as containing written information on the first information layer is
5 substantially equal to the area regarded as containing written information on the second information layer.
2. Method according to claim 1, wherein the area regarded as containing written information on the first information layer and/or the area regarded as containing written
10 information on the second information layer comprise an area where no information is recorded.
3. Recording device for recording information on a recordable multi-layer record carrier operative for executing a method as claimed in claim 1 or 2.
